DEMOGRAPHIC ANALYSIS – Data Smartstay SDN. BHD. 2026.

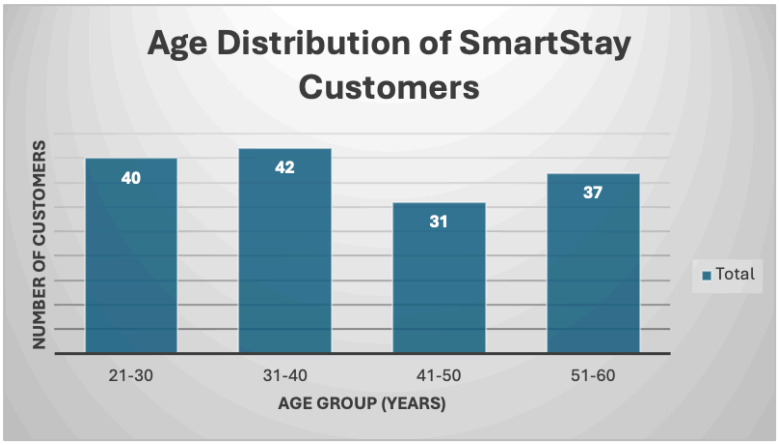

1. **Distribution of Customers by Gender.**

Row Labels	Count of Gender
Female	69
Male	81
Grand Total	**150**

The pie chart analysis shows that the majority of SmartStay's guests in Malacca belong to the category of males, which constitutes 54%, i.e., 81 out of 150 clients. On the other hand, females account for only 46% of the total number of customers in SmartStay, i.e., 69 customers. These numbers clearly suggest that SmartStay's temporary accommodation business receives equal male and female visitors in Malacca.

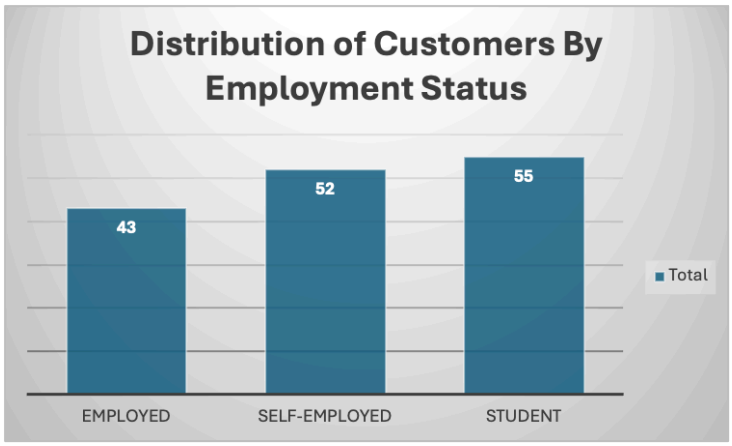

2. Age Distribution of Smartstay Customers

Row Labels	Count of Age
21-30	40
31-40	42
41-50	31
51-60	37
Grand Total	**150**

The histogram indicates that the customers of SmartStay are aged between 21 and 60, with an average age of around 39.6. The largest customer group is aged between 31 and 40 (42 customers), followed by 21 and 30 (40 customers), 51 and 60 (37 customers), and 41 and 50 (31 customers). From the above analysis, it can be concluded that the major customers for SmartStay are middle-aged individuals who might be traveling during their vacation periods in Malacca.

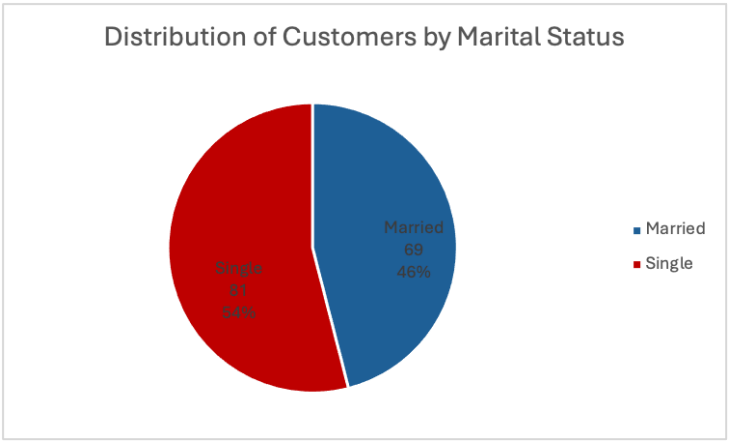

3. Distribution of Customers by Employment Status

Row Labels	Count of Employment_Status
Employed	43
Self-employed	52
Student	55
Grand Total	**150**

According to the bar graph, the highest number of clients falls into the student category (55 clients, 36.7%) followed by the self-employed group (52 clients, 34.7%), with the fully employed representing the lowest percentage (43 clients, 28.7%). The information above is important given the tourism schedule in Malacca, where students and self-employed people usually have flexible schedules and would most likely book trips during holiday times and festivals organized through Visit Melaka Year 2026.

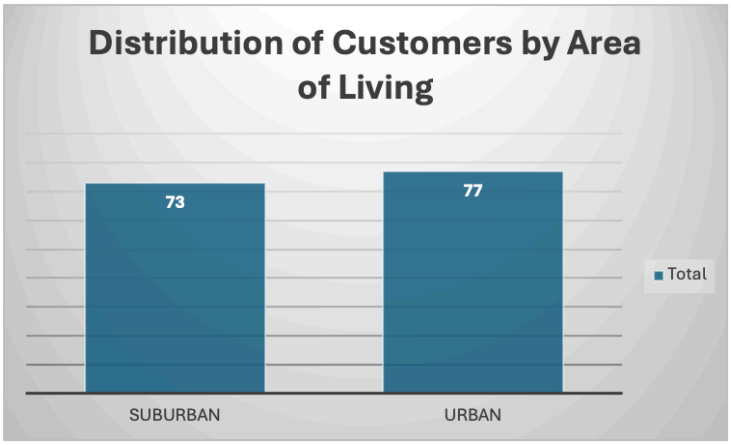

4. Distribution of Customers by Marital Status

Row Labels	Count of Marital_Status
Married	69
Single	81
Grand Total	**150**

Based on the pie chart, the majority of customers in the dataset are singles (54%, 81 customers), while the remaining are married couples (46%, 69 customers). The balance between the two segments implies that SmartStay's apartments accommodate not only individual travelers but also groups with families. Since there are both two-bedroom and three-bedroom apartment types available in the company's portfolio, SmartStay can satisfy both categories of customers who visit the historic city of Malacca.

5. **Distribution of Customers by Area of Living.**

Row Labels	Count of Area_of_Living
Suburban	73
Urban	77
Grand Total	**150**

According to the graph above, it can be seen that there are more urban area consumers (77 consumers, 51.3%) than those in the suburban area (73 consumers, 48.7%). The equal consumer distribution implies that SmartStay's short-term rental business is not only attractive to urban consumers but also to suburban consumers. Urban consumers and suburban consumers have equal interests in short-term rental services in Malacca due to the increase in tourism activities during the World Tourism Day 2025 and World Tourism Conference 2025 events.

In summary, the demographic profile obtained from 150 SmartStay customers indicates that the most common gender among the users is males at 54%, with an age range of 31 to 40, being mainly students (36.7%). Over half of the customers are single individuals (54%) who reside in urban areas (51.3%). The typical customers of SmartStay are predominantly young adult students due to the tourism attraction of Malacca.
